The Third International Workshop on Process Querying (PQ 2018) aims to provide a high quality forum for researchers and practitioners to exchange research findings and ideas on technologies and practices in the area of process querying. Process querying studies automated methods for the inquiry, manipulation, and update of models and data of observed and envisioned processes, as well as relationships thereof, with the ultimate goal of converting process-related information into decision making capabilities. Process querying research spans a range of topics from theoretical studies of algorithms and the limits of computability of process querying techniques to practical issues of implementing process querying technologies in software. Examples of practical problems tackled using process querying include process compliance, standardization, reuse, variance management, comparison, and monitoring.

WORKSHOP TOPICS

The main topics relevant to the PQ workshop include, but are not limited to:

- Behavioral and structural methods for process querying
- Imperative and declarative process querying methods
- Exact and approximate process querying methods
- Expressiveness of process querying methods
- Decidability and complexity of process querying methods
- Process query languages and notations
- Indexing for fast process querying
- Empirical evaluation and validation of process querying methods
- Label management in process querying
- Information retrieval methods in process querying
- Process querying of big (process) data
- Meta-models and architectures for process querying
- Automatic management of process models, e.g., process model repair
- Automatic management of process model collections
- Event log querying
- Event stream querying
- Process performance querying
- Multi-perspective process querying methods, e.g., querying process resources, data, etc.
- Process querying and rich ontology annotations
- Applications of process querying methods for process compliance, standardization, reuse, etc.
- Experience reports from implementations of process querying tools
- Case studies in process querying

SUBMISSION INSTRUCTIONS

Prospective authors are invited to submit papers for presentation in any of the areas listed above. The paper selection will be based upon the relevance of a paper to the main topics as well as upon its quality and potential to generate relevant discussion. Authors are requested to prepare submissions according to the format of the Lecture Notes in Business Information Processing (LNBIP) series by Springer (http://www.springer.com/computer/lncs?SGWID=0-164-6-791344-0). Submissions must be in English and must not exceed 12 pages (including figures, bibliography and appendices). Each paper should contain a short abstract, clarifying the relation of the paper with the main topics (preferably using the list of topics above), clearly state the problem being addressed, the goal of the work, the results achieved, and the relation to other work. Papers should be submitted electronically as a self-contained PDF file via submission system (https://www.easychair.org/conferences/?conf=pq2018). Submissions must be original contributions that have not been published previously, nor already submitted to other conferences or journals in parallel with this workshop.
PUBLICATION

All workshop papers will be published by Springer as a post-workshop proceedings volume in the series Lecture Notes in Business Information Processing (LNBIP). These proceedings will be made available to all registered participants approximately four months after the workshop, while preliminary proceedings will be distributed during the workshop. For each accepted paper, at least one author must register for the workshop and present the paper.

KEY DATES

- Submission deadline: 25 May 2018
- Notification deadline: 29 June 2018
- Camera-ready papers deadline: 13 July 2018
- Workshop: 10 September 2018

COMMITTEES

ORGANIZERS

Artem Polyvyanyy, Queensland University of Technology
Arthur ter Hofstede, Queensland University of Technology
Claudio Di Cicco, Vienna University of Economics and Business

PROGRAM COMMITTEE

Agnes Koschmider, Karlsruhe Institute of Technology
Ahmed Awad, Cairo University
Artem Polyvyanyy, Queensland University of Technology
Arthur ter Hofstede, Queensland University of Technology
Boudewijn van Dongen, Eindhoven University of Technology
Chun Ouyang, Queensland University of Technology
Claudio Di Cicco, Vienna University of Economics and Business
David Knuplesch, Ulm University
Dirk Fahland, Eindhoven University of Technology
Fabrizio Maria Maggi, University of Tartu
Gero Decker, Signavio
Hagen Völzer, IBM Research - Zurich
Hajo Reijers, VU University Amsterdam
Henrik Leopold, VU University Amsterdam
Hyerim Bae, Pusan National University
Jochen De Weerdt, Katholieke Universiteit Leuven
Jorge Munoz-Gama, Pontifical Catholic University of Chile
Luciano García-Bañuelos, University of Tartu
Manfred Reichert, Ulm University
Marcello La Rosa, University of Melbourne
Massimiliano de Leoni, Eindhoven University of Technology
Matthias Weidlich, Humboldt University of Berlin
Minseok Song, Pohang University of Science and Technology
Remco Dijkman, Eindhoven University of Technology
Seppe vanden Broucke, Katholieke Universiteit Leuven
Stefan Schönig, University of Bayreuth
Stefanie Rinderle-Ma, University of Vienna
Wil van der Aalst, RWTH Aachen University
